YEARS

WWW.BRADFORDPRODUCTS.COM

Since 1982, Bradford Products has worked with architects, aquatic designers and contractors to provide them with the very best products available. As a family-owned and operated company, Bradford has over 40 years of experience with the design and manufacture of custom stainless steel aquatic vessels. With over a thousand installations throughout North America and internationally, we have the experience and ability to handle the most demanding projects.

CAD engineering

CNC laser cutting

AWS certified welding procedures

Precision in Manufacturing

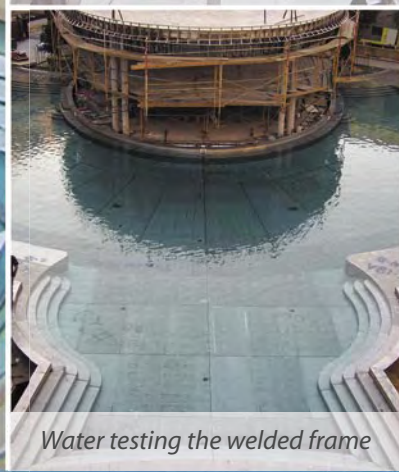

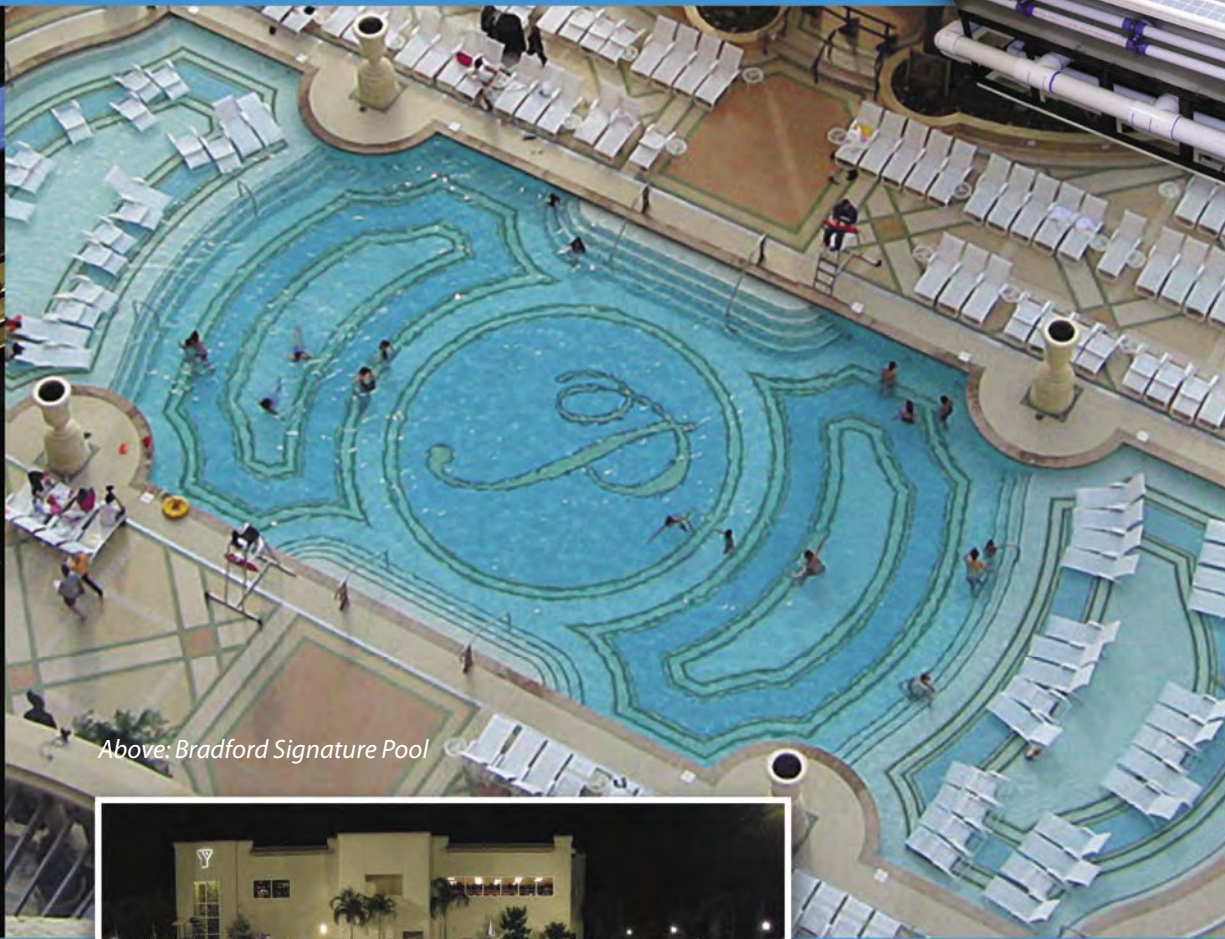

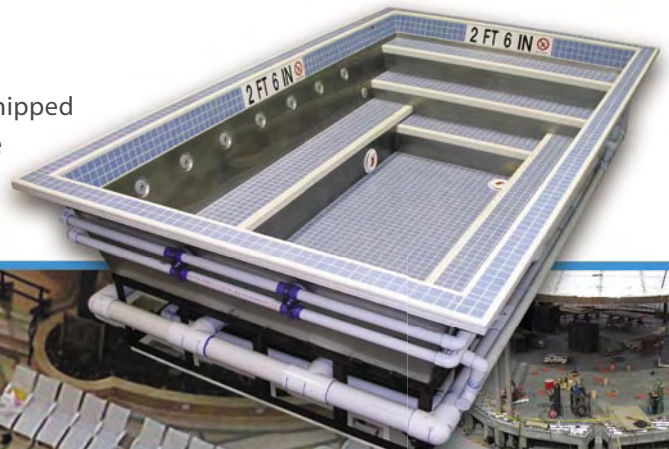

Our products are custom designed using the latest 3D modeling software, ensuring accuracy throughout the design process. All Bradford vessels are CAD engineered and manufactured to exacting tolerances, with shop drawings generated directly from the model to facilitate code approvals. The CNC laser used in the fabrication process precision cuts stainless steel to within 1/1000". The application of ceramic tile designs and patterns ensure our vessels are as beautiful as they are functional.

Commercial Hot Tubs

Bradford Products' engineered stainless steel hot tubs can be shipped fully assembled and ready for installation. However, onsite assembly allows for preexisting structures to remain intact and allows greater access to tight spaces.

Bradford Signature Pool

Made from high grade stainless steel, a Signature Bradford Pool will never delaminate, crack, peel, corrode, discolor, leak, or require refinishing. The strength to weight and full load to weight ratios are ideal for retrofitting on grade or above grade installations or lightening the load of a new build project. A stainless steel pool can weigh up to 300% less than a similar size, shape and finish Gunitite or concrete pool, reducing structural engineering costs.

BSP Sport & Leisure Pool

By improving upon some well-established designs and incorporating new techniques, Bradford Products introduces a pool that satisfies commercial and competitive needs without breaking the budget. The modular stainless steel pool wall greatly reduces installation time, while the bolt-together system enables assembly with exact truing that can be performed by local pool contractors and work crews with minimal instruction. With this system, any size, depth, and layout is possible!

Bradford utilizes the DLW delifol® lining system in all of our BSP Sport and Leisure Pools. The high grade, 60 mil PCV-P liner reinforced with high-tensile polyester mesh fabric is attached to the pool wall on the backside with a unique method that eliminates the need to penetrate the liner. DLW delifol® has been used throughout Europe for 40 years in over 200,000 swimming pool applications. It is available in many colors, along with nonslip and patterned variations.

The Bradford SpaExperience

Bradford Products' luxury vessels for day spas and health centers provide the ultimate experience for the spa-goer and the facility owner. Customers undergo treatment in the finest environment available, and proprietors can relax knowing that they own a high quality product paired with exceptional customer support.

"Grace" Heated Lounger

Roman Vitality Tub & Deluge Shower

Innovative Design

Form meets function with the modern design and technology-driven operation of Bradford SpaExperience products. Custom design is available to suit all floorplans and specific applications. Ongoing research and development provides a source of fresh, innovative ideas and products for your spa.

Our team of in-house designers, engineers, and highly skilled fabricators are ready to turn your ideas into a reality. Let Bradford's professionals provide your clients with the luxurious experience they deserve!

SpaExperience Product Line:

- Relaxation and treatment rooms
- Vitality, soaking, and hot tubs
- Experience, deluge, and Vichy showers
- Watsu, plunge, and thalasso pools
- Heated loungers and benches
- Ice fountains and scrub tables

Crystal SteamRoom® & Starscape Lighting

Water Features

Dramatize your aesthetic by adding the look and sound of moving water to your environment. Bradford Products offers a full line of water features including:

- Waterwalls/weirs
- Sheeting waterfalls
- Negative edges
- Viewing windows
- Laminar jets/fountains

Residential Hot Tubs

The combination of stainless steel and tile inlay produces a hot tub that is beautiful, long-lasting and an investment in serious relaxation. Choose from our standard models or create your very own. If you can imagine it, we can build it!

Custom hot tub with WaterWall & negative edge

SwimSpa® with optional PowerShower

SwimSPA

SwimSpa®

Bradford Products is pleased to introduce the latest addition to its lineup of stainless steel aquatic vessels: the 8' x 15' and 8' x 17' RibbonFlo SwimSpas®.

When our customers speak, we listen. That is why Bradford's talented team of designers and engineers have created the ultimate swim spa...part exercise machine, part relaxation, pure enjoyment!

Now you can have the benefits of owning a large pool and conventional hot tub in one convenient and space-saving package. The addition of tile inlay to stainless steel provides a colorfast, nonporous surface that will not absorb stains nor odors. A Bradford SwimSpa® will not fade nor lose its original color, which means it will look as good as the day you got it—for life.

SwimSpa®...truly a lasting investment in fun and fitness!

Custom Hot Tubs

You decide the size, shape, and style of a Bradford custom hot tub. Tile patterns and themes can be implemented into the finished hot tub to offer a unique "one of a kind" appearance.

Hydrotherapy Vessels

Bradford’s contributions to the rehabilitation and healthcare communities include stainless steel hot/cold bruise tanks, soaking tubs, jetted tubs and therapy vessels. These, like all Bradford vessels, are custom-built to your specifications from 316L and 304L stainless steel.

Hydrotherapy Pool

Huichica Soaking Tubs

| Stainless Steel | Concrete Construction |
|--|---|
| QUALITY Precision to 1/1000" | Free-formed to 1/4" |
| DURABILITY 25 year warranty | Cracking & leaking from chlorinated water |
| CONSTRUCTION Deliver in 1 piece or assemble onsite | Large, cumbersome staging area |
| STRENGTH:WEIGHT 25 lb./sq.ft. | 250 lb./sq.ft. same footprint |
| ENVIRONMENT Stainless steel is a "green" material | Caustic paints, sealants, water loss |
| AESTHETICS Long life, maintains look | Respraying/acid washing yearly |

Our Environment

Bradford Products has pioneered the use of stainless steel—itself made from 65–80% recycled steel—in the manufacture of aquatic vessels. Stainless steel is one of the most environmentally responsible materials used in manufacturing today. At the end of its long life cycle, a stainless steel vessel will be 100% recyclable. The self-healing layer on the metal’s surface eliminates environmentally hazardous protective coatings.

Stainless steel demands minimal maintenance compared to other finish materials; significantly less chemical cleaners and treatments are required. Bradford’s aquatic vessels not only will out-last comparable aquatic vessels formed of polymerized petrochemicals which employ increasingly scarce and high-cost raw material but are superior to concrete shells as well.
