DESIGNED FOR
DEDICATED AND
PROFESSIONAL CARE
Bradford’s professional involvement in physical therapy, rehabilitation and sports medicine dates back to the early 80’s. Since then, health care professionals have used Bradford stainless steel tubs and therapy systems across the country. We understand how the physical therapy industry benefits from flexibility of design to accomplish goals with their patients. Bradford’s therapy vessels ensure that your facility has the very best in quality and gives your professionals the tools needed to provide professional care. We use a commercial grade slip-resistant mosaic tile. We configure the vessels in almost any depth, with or without observation windows. The stainless steel construction allows for quick draining and refilling to make these vessels hygienic and easy to clean. Get started with our design team to begin creating your quality and functional therapy vessel.
